

Connected River

Smart and Safe Sharing of Waterways & Waterfronts

About The Project

Connected River is an EU-funded transnational innovation project which aims to tackle challenges related to shared waterways and waterfronts – resulting from increasing conflicts of use, for example due to urban development, recreational use and port operations.

The project focusses on two key targets:

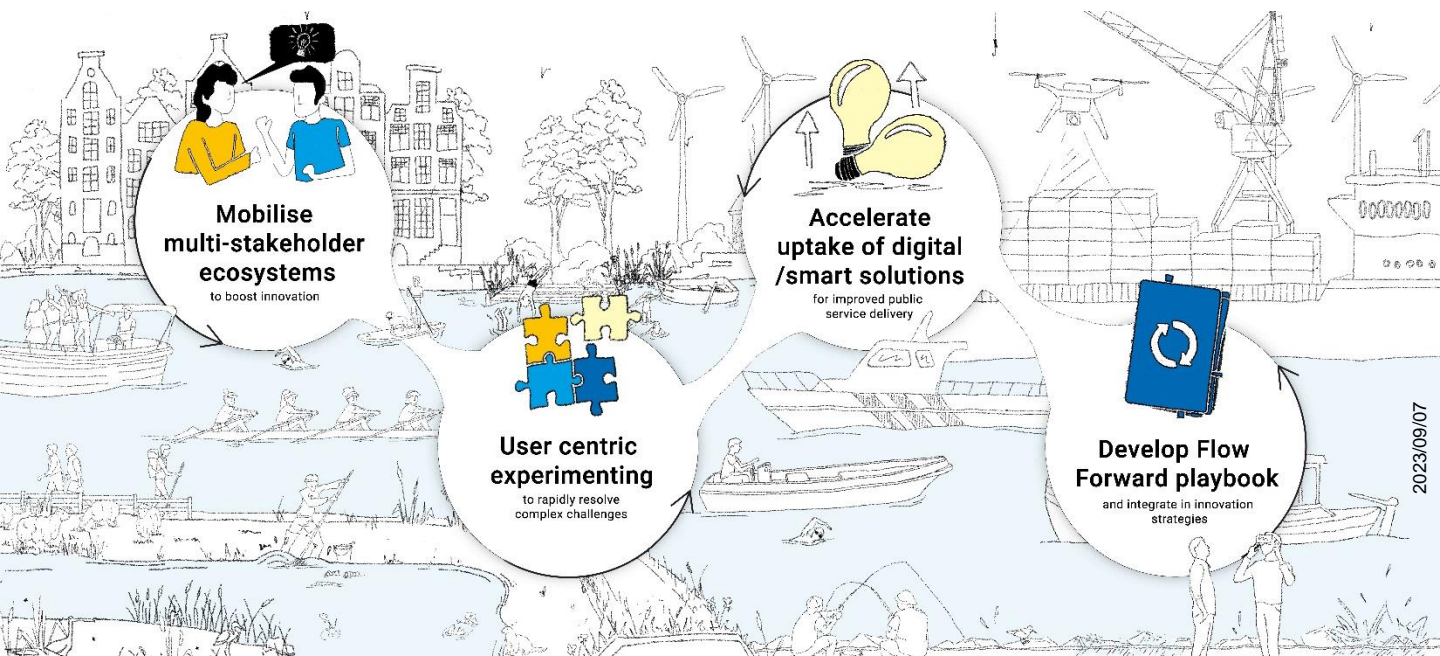

- Empowering public authorities to act user-oriented and in an agile way.
- Developing smart solutions to improve accessibility, safety and usability of shared waterways and waterfronts for all relevant user groups.

www.connected-river.eu

Project Objectives

- Mobilise multi-stakeholder eco-systems for user-centric, agile innovation.
- Conducting user-centric, agile innovation on challenges that shared waterways and waterfronts face.
- Accelerate the uptake of digital/smart solutions to improve services to stakeholders.
- Developing the playbook and roadmaps for a fit-for-future response to challenges.

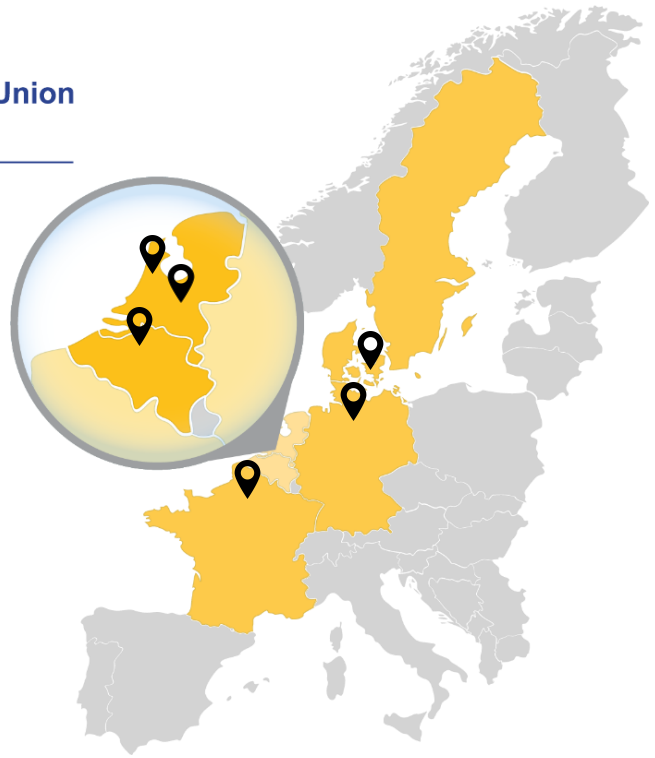

Connected River

The Approach:

Connected River aims to strengthen the capacities of multi-stakeholder ecosystems to deliver services that ensure the safety, accessibility and livability of shared waterways and waterfronts in the North Sea Region.

For this purpose, diverse partners and stakeholders are brought together in 4 work packages for 6 pilot regions: Amsterdam, Hamburg, Kleine Nete, Lille, Nijmegen, Vordingborg.

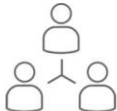

Connected River

The European collaboration in innovative short cyclical innovation.

Flow Forward Platform

Based on the pilots' lessons learned, Connected River delivers a playbook (strategy) to maximise uptake and transferability of the Flow Forward approach.

This sets out the values, processes, and procedures for a fit-for-future response to challenges that shared waterways and waterfronts face.
