

MoLo Hubs

People-Centric Mobility & Logistics Hubs

About The Project:

MoLo Hubs is an EU-funded transnational innovation project that aims to reduce urban traffic by initiating and prototypically implementing new and convenient logistics service offers at urban mobility hubs.

Five pilots will make an important contribution to reduce urban traffic, increasing the attractiveness and functionality of urban mobility hubs and also give an insight into how user-centred logistics services can be designed.

Project Objectives

- Developing and implementing user centric logistics services and solutions at urban mobility hubs to reduce urban traffic.
- Increase attractiveness of mobility hubs.
- Make use of up-to-date digital technologies, to implement smart and digital solutions and to foster digital skills.

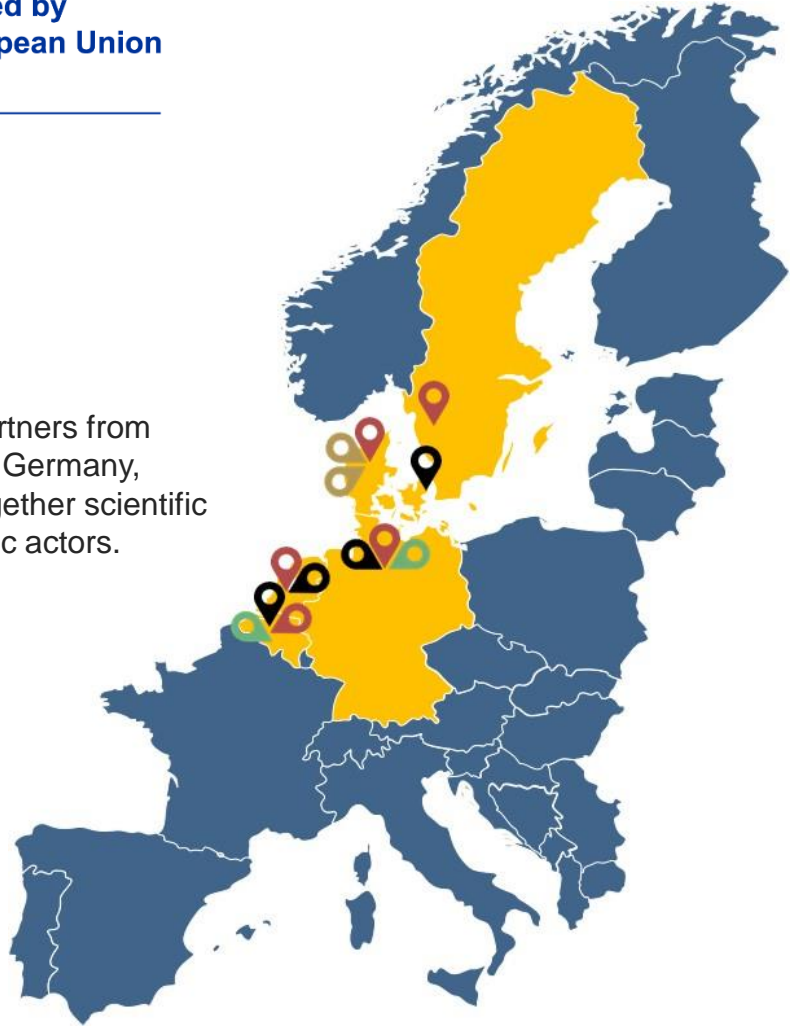

MoLo Hubs

Project Partners:

The project consortium consists of 13 partners from 5 different countries (Belgium, Denmark, Germany, Netherlands and Sweden) and brings together scientific expertise, public authorities and economic actors.

-  5 Host Partners (pilot cities)
-  4 Knowledge Partners
-  2 Network Partners
-  2 Implementation Partners
