MANABAS COAST

Empowering Nature for Coastal Resilience

The MANABAS COAST* project aims to pave the way for mainstreaming of Nature-based Solutions in the North Sea region. It will develop a proven and accessible framework, tools, and guidelines, based on pilot examples from Sweden to France.

The project will ultimately facilitate integrated policies and practices for Flood and Coastal Erosion Risk Management, while enhancing biodiversity. In this way MANABAS COAST contributes to adaptation to climate change and sea level rise.

* MAInstreaming NAture-BAsed Solutions through COASTal systems
