

SHAPING THE FUTURE FOR THE WATERWAY: 4 SCENARIOS

Connected River

The port is a central area, playing an essential role in local dynamism. It hosts guided tours to discover history, heritage, and logistical activities.

Also, the port is a strategic infrastructure for modal shift: urban logistics and freight transport.

This vision highlights the potential of a productive canal raising public awareness of the port's sustainable development.

Waterway and riverbanks are developed to ensure harmonious and safe cohabitation between different uses.

Clear and visible signs guide users.

On the water, dedicated activity zones are reserved and defined, with appropriate regulations and event programming, particularly during the summer season.

As the "green lung" of the city, the waterway creates a continuous area where nature reveals its presence.

It plays a major role in combating climate change by providing a cooling space and a refuge for wildlife and flora.

Users would be encouraged to pay attention to the biodiversity, identify its fragility and adopt respectful behavior.

The canal could become a real part of urban practices, where water becomes a leisure space accessible to all.

The canal offers an aquatic leisure area with designated, supervised, and accessible swimming zones.

Users can enjoy swimming in a safe environment, with educational features such as water quality signs and environmental respect.
