

MoLo Hubs

People-Centric Mobility & Logistics Hubs

About The Project:

MoLo Hubs combines mobility hubs and logistics services to improve quality of urban life and boost mobility transition. We cut emissions, reduce traffic and create urban meeting places to make our cities more liveable.

Five pilots will make an important contribution to reduce urban traffic, increasing the attractiveness and functionality of urban mobility hubs and also give an insight into how user-centred logistics services can be designed.

Project Objectives:

- Developing and implementing user centric logistics services and solutions at urban mobility hubs to reduce urban traffic.
- Increase attractiveness of mobility hubs.
- Make use of up-to-date digital technologies, to implement smart and digital solutions and to foster digital skills.
