

## WP 2

# H2 Demonstrators + develop and showcase solutions Work package leader: NEC

## Marine FUEL CELL HYDROGEN applications

- Range extension of electric vessels.

To extend the sailing range, we can connect our Energy Box with the battery pack on board and in this way be taken a few hours longer depending on the number boxes on board.

- Energy bringing where it is needed. By placing our energy box on the deck of the ship and connecting it, a large power bank is created that can be used where necessary.  
e.g. Construction sites , EV / E-bike charging
